

MSTI (Master of Science in Technology Innovation) graduate student at the University of Washington's Global Innovation Exchange — a first-of-its-kind program backed by Microsoft, built around a curriculum spanning applied AI/ML, embedded systems, business strategy, design and user research: some of the core competencies of modern product management. Bringing 6+ years of operations, sales, and project management experience alongside hands-on work translating technical concepts into built and user-validated features. Seeking product management internships where I can get close to the problem — working closely with engineers to ship technically ambitious products that create real user value, particularly in AI-driven platforms where data and operational intelligence drive business outcomes.

EDUCATION/PROJECTS

University of Washington, Seattle, WA | Master of Science | 2025 - 2027

Technology Innovation (Connected Devices) – UW College of Engineering

Relevant Coursework – Sensors & Circuits, Fundamentals of Technology Strategy, Managing Data & Signal Processing, User Research and Evaluation Studio, Programming for Digital and Physical User Interface, Hardware/Software Lab I & II, History and Future of Technology, Design Thinking Studio

Skills: SQL · Python · Signal Processing · Embedded Systems · AI/ML · Agile

Music Genre & Instrument Classifier | Machine Learning & Signal Processing Project (2026)

- Scoped and built a CNN-based audio classification system, translating problem requirements into data, feature, and model design decisions while balancing performance and development constraints
- Led experimentation and validation, using performance metrics and error analysis to prioritize improvements and guide model iteration

Context-Aware Habit Tracker | Full-Stack Web App with AI Insight Layer Project (2026) (Ongoing)

- Leading end-to-end product definition of a habit-tracking web app with an AI insight layer — defining KPIs, scoping MVP features, and making prioritization tradeoffs between tracking depth and user friction to drive measurable behavior change

Acoustic Dosimeter | Two-Node Wireless Embedded System Project (2026)

- Designed a wireless sensor-display system for real-time sound exposure monitoring: a sensing node performs on-device DSP (RMS, IIR smoothing, cumulative exposure modeling) and transmits a privacy-preserving metric over BLE to a display node
- Made deliberate tradeoffs — BLE over ESP-NOW for bidirectional communication, a decay-based exposure model capturing intensity × duration without requiring calibrated dB measurements

Ambient Home Activity Classifier | Embedded Machine Learning Device Project (2026) (Ongoing)

- Driving the design and deployment of a battery-powered ambient audio classifier on a XIAO ESP32S3 microcontroller, using on-device data signal processing and machine learning within embedded memory, power, and latency constraints

Motion Maven | Handheld Motion-Controlled Game Device (2025)

- Led a hardware/software project building a handheld motion-controlled game on a XIAO ESP32-C3, using accelerometer-based tilt and shake detection with IIR smoothing to translate physical gestures into real-time game inputs
- Designed a state machine architecture and modular codebase separating motion processing, audio feedback, and persistent scoring — enabling independent tuning of gesture sensitivity, difficulty curves, and UX flow

Washington State University, Pullman, WA | B.A. in Political Science (Pre-Law) | 2011 - 2015

Division I Football Player

PROFESSIONAL EXPERIENCE

Project Manager (General Contractor) at ZigZag LLC (2022 - 2025)

- Promoted from assistant to project manager within 9 months, taking ownership of end-to-end execution across 10+ projects ranging from \$5,000 to \$40,000+
- Aligned subcontractors, suppliers, and clients as the single point of accountability, prioritizing tradeoffs across cost, timeline, and quality under shifting constraints — shortening project timelines by an average of 12% and reducing scope change disputes with clients

Operations Manager at Degrazia's Autobody (2019 - 2021)

- Owned coordination across sales, parts logistics, and production for a shop handling 40+ vehicles per month, acting as the connective layer between three previously siloed functions
- Identified scheduling as the primary bottleneck between sales and production, redesigned the intake process, and reduced average vehicle cycle time by 2 days

Business Development at Century 21 NW Real Estate (2017 - 2019)

- Built and managed a recruiting pipeline of 100+ prospects through cold outreach, competitive sourcing, and relationship development — prioritizing based on readiness signals and timing to maximize conversion
