bryant.colemanh@gmail.com

MSTI (Master of Science in Technology Innovation) graduate student at the University of Washington's Global Innovation Exchange — a first-of-its-kind program backed by Microsoft, bridging applied AI/ML, embedded systems, and product strategy. Bringing 6+ years of operations and project management experience driving execution across cross-functional teams as a single point of accountability. Seeking AI product management roles where model deployment, cross-functional execution, and platform-level thinking drive how AI capabilities ship to real users at scale.

EDUCATION/PROJECTS

University of Washington, Seattle, WA | Master of Science | 2025 - 2027

Technology Innovation (Connected Devices) – UW College of Engineering

Washington State University, Pullman, WA | B.A. in Political Science (Pre-Law) | 2011 - 2015

Division I Football Player

Skills: Strategy · AI/ML · Python · ONNX · Model Optimization · Signal Processing · PyTorch & TensorFlow/TFLite · Embedded Systems · Product Roadmapping · Agile

Smart Workout Armband | Embedded ML & Wearable Systems (2026)

- Led team in overall HW/SW product development and ML pipeline for a wearable real-time form-detection system on multiple workouts — collected and labeled exercise datasets from a 9-DoF IMU, trained and deployed a classifier distinguishing correct vs. incorrect strength training form, and demoed a fully functional system with a live dashboard

Context-Aware Habit Tracker | Full-Stack Web App w/ AI Insight Layer (2026)

- Led product development of a Next.js/Supabase habit-tracking web app with an AI insight layer built on Anthropic's Claude API that surfaces behavioral patterns from user activity, scoping MVP features with tradeoffs between tracking depth and user friction

Music Genre & Instrument Classifier | Machine Learning & Signal Processing Project (2026)

- Scoped and built a CNN-based audio classification system, translating problem requirements into data, feature, and model design decisions, then using performance metrics and error analysis to prioritize improvements across model iterations

Ambient Home Activity Classifier | Embedded Machine Learning Device (2026)

- Drove design and deployment of a battery-powered ambient audio classifier on a XIAO ESP32S3, running on-device signal processing and ML within embedded memory and power constraints

PROFESSIONAL EXPERIENCE

Product Manager Intern at IpserLab, a startup foundry (May 2026 – Present, Part-Time, Remote)

- Owned product strategy for an early-stage university tech-transfer platform, synthesizing 16 legacy strategy documents spanning three prior product directions into a single positioning brief — surfacing a core business-model gap in which the primary user segment held no purchasing authority
- Benchmarked six incumbent platforms against industry market data to reposition the product toward an underserved segment of regional and land-grant institutions, and authored a Now/Next/Later roadmap with validation gates that deferred six proposed features until demand was confirmed
- Built an interactive role-based prototype serving three distinct user types through one shared surface, securing alignment from engineering and design on a redirected product direction

AI/ML Engineer Intern at Kashmir World Foundation (May 2026 – Present, Part-Time, Remote)

- Led ONNX export, compression, and validation of a 6,522-class BirdNET audio classifier for edge deployment — patched an unsupported RFFT operation with a cosine-DFT matrix multiply and pruned to 493 regional species, cutting model size 40% (FP32) and 70% (FP16) for battery-powered recorders
- Overturned three inherited "confirmed facts" by measuring rather than assuming, then validated dual-model parity across 51,720 field recordings — 100.000% top-1 agreement for FP32, 99.87% for FP16
- Co-designed the cross-team pack contract with the Director of AI Operations and built a FastAPI benchmarking bridge to match it — verified bit-exact against the reference pipeline, with startup gates preventing mismatched model/label pairs
- Served as technical coordination point for the UTSS pipeline, aligning model and interface requirements across three teams and presenting compression findings to the full organization

Project Manager (General Contractor) at ZigZag LLC (2022 - 2025)

- Owned end-to-end execution across 20+ projects (\$5,000–\$80,000+) as the single point of accountability across subcontractors, suppliers, and clients — shortening project timelines by an average of 12%

Operations Manager at DeGrazia's Auto Body (2019 - 2021)

- Coordinated sales, parts logistics, and production for a shop handling 40+ vehicles/month — redesigned the intake process around the scheduling bottleneck, cutting average cycle time by 2 days

Business Development at Century 21 Northwest Realty (2017 - 2019)

- Built and managed a recruiting pipeline of 100+ prospects through cold calls, competitive sourcing, and relationship development — prioritizing based on readiness signals and timing to maximize conversion
